Empirical Multi-Condition Stress Response Profiles Across Expanded Literature Paradigms
(a) Asymmetric Label Corruption
($P(0\to1) = 2 \times P(1\to0)$)
Diagnostic Test Accuracy (%)
Asymmetric Flip Noise $P(0\to1)$ (%)
TRTL (Proposed)
Deep MLP
RBF-SVM
Random Forest
Energy G-L (2026)
(b) Covariate Jitter Distortion
(Off-Manifold Abstention at $\sigma > 0.3$)
Test Accuracy (%)
Covariate Jitter Standard Deviation σ
TRTL (Compact Wave Support)
Deep MLP (Global Polyhedra)
RBF-SVM
Random Forest
Manifold Void Boundary R_{cut}
(c) Low-Data Starvation Regime
(Sparsity Breakdown Threshold $N < 50$)
Test Accuracy (%)
Training Data Availability (%)
TRTL ($k = 5$ Entropy Scaling)
Deep MLP
RBF-SVM
Random Forest
